

TANISHQ SHARMA

Software Development Engineer

sxtanishq@gmail.com | linkedin.com/in/tanishqxsharma | github.com/SharmaTanishq

India | Open to relocate to Dublin, Ireland

PROFESSIONAL SUMMARY

Software Development Engineer with 5+ years designing, building, and operating production systems on AWS. Own the full lifecycle: design, delivery, CI/CD, go-live, and on-call operations under SLAs. Track record of improving latency and reliability of live customer-facing systems.

TECHNICAL SKILLS

Languages & frameworks: TypeScript, JavaScript, Python, SQL, Node.js, NestJS, Next.js, React, Vue

Data & messaging: PostgreSQL, MySQL, Redis, Elasticsearch/OpenSearch, RabbitMQ

Cloud & DevOps: AWS (EKS, Lambda, EC2, ALB, VPC, RDS, S3), Docker, Kubernetes, Terraform, GitLab CI/CD, Sentry

Practices: system design, full SDLC, code reviews, on-call and incident response, observability

PROFESSIONAL EXPERIENCE

Skillnet Solutions, USA — Senior Full Stack Engineer

January 2023 – Present

- Own and maintain CI/CD for the platform monorepo end to end: led the pipeline migration to a new CI provider and run automated checks and promotion across 3 environments (develop, staging, production).
- Authored the go-live preparation sheet, a 40+ item readiness checklist (cutover, rollback plan, data validation, smoke tests, owner sign-off) that the team used to launch with zero rollbacks.
- Serve as on-call engineer: triage critical production alerts daily and resolve incidents within agreed SLAs (15-minute acknowledgment for P1s), keeping storefronts and in-store kiosks available.

Wilco — retail commerce platform

- Cut kiosk product search latency by 70% (~5s to ~1.5s) by removing unused facet aggregations and tightening query shape.
- Restored service in 2 production search outages (cluster circuit-breaker errors and a schema drift that broke every text filter), then added a guard that blocks unsafe schema changes in production.
- Enabled search by store item number, turning empty results into exact product matches for store associates.

Fleet Farm — retail commerce platform

- Built the transactional email integration (order confirmation, shipping, and pickup-ready notifications) covering 100% of online orders, reducing order-status support contacts by ~25%.
- Integrated real-time sales tax calculation into checkout, replacing manual tax adjustments and eliminating tax-related order corrections.

Maharshi Tech Solutions — Software Engineer

January 2022 – December 2022

- Delivered backend services and asynchronous pipelines with retries and fault tolerance, keeping data flowing when downstream partners failed.
- Added structured logging and monitoring that shortened production debugging, and coached junior engineers on code quality and operability.

DMI, India — Software Engineer

January 2021 – December 2021

- Built backend services and data-sync pipelines for high-volume systems, designed for performance and fault tolerance with consistent retry and error handling.

PROJECTS

- **Bridgeflow** (bridgeflow.app): visual drag-and-drop platform for migrating products, orders, and customers between commerce platforms.
- **Real-time AI agents:** voice/calling and ops agents with streaming responses, tool use, and automatic recovery when upstream calls fail.
