

TANISHQ SHARMA

sxtanishq@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior engineer with 5+ years building production **TypeScript, JavaScript, React, and Node.js systems**. Led search and data-modeling work on Elasticsearch (OpenSearch-compatible APIs) and Kibana: query/mapping/cluster health, aggregations, schema correctness, and latency under real kiosk load. Profile and optimize queries, tame timeouts, and ship safeguards so production behaves predictably. Own projects from technical design through APIs, background jobs, and deploy. Use AI (Cursor) daily to accelerate development and debug, while owning the final review. Strong async collaboration: GitHub, code review, ADRs/SDRs across time zones.

SKILLS

TypeScript, JavaScript, React, Next.js, Node.js, Express, NestJS, Vue, Angular

Elasticsearch, OpenSearch-compatible APIs, Kibana, query profiling, aggregations, mappings, cluster health, schema correctness

Node.js APIs, data modeling, PostgreSQL, Redis, background tasks (Lambda, EventBridge, RabbitMQ), tests, CI/CD, Sentry, telemetry-minded logging

AWS, Docker, Kubernetes, Git, GitHub/GitLab, distributed team, AI-assisted development (Cursor)

PROFESSIONAL EXPERIENCE

Skillnet Solutions, USA | Senior Full Stack Engineer | 01/2023 – Present

Wilco : Distributed System | E-Commerce Implementation

- Owned search from technical design through production: Elasticsearch/OpenSearch-compatible query, mapping, and cluster APIs plus Enterprise Search/Kibana on Kubernetes — indexing, filters, engine schema, cluster health.
- Performance at scale: profiled faceted search, removed unused aggregations, tightened query shape kiosk latency from **5s to 1.5s (~70%)**; tamed staging **timeouts (6s vs develop 0.5s) by right-sizing Elasticsearch heap**.
- Correctness safeguards: restored production after parent circuit-breaker 500s (empty results) and mapping/schema drift that retyped text filters as numbers (400s on every string filter); blocked full updateSchema on prod.
- TypeScript/Node.js APIs and Vue/Nuxt + Angular UIs**; PostgreSQL/MySQL + Redis; background tasks (Lambda/EventBridge, RabbitMQ); GitLab CI/CD, tests/automated checks, **Sentry**; led the work without a dedicated ops team.
- Used Cursor daily to debug query/heap issues faster; still owned outcomes via code review and Solution Decision Records.

Mars Phoenix (9 months)

- Led small-to-medium **TypeScript/React (Next.js) and Node.js GraphQL BFF** features from design to production: 50+ PRs, in-depth code review, ADRs across a distributed customer.
- Telemetry and safeguards: S3 lifecycle/IAM/versioning so object identity stayed correct; diagnosed a stale-publish race and wrote an ADR for concurrency-safe updates. **Datadog** for Observability & Monitoring
- Human-controlled workflows: mandatory review acknowledgement before checkout — analyst-like confirm-before-act, not an unsupervised agent.

Fleet Farm / Colgate

- Background tasks and APIs for tax, UPS, webhooks, loyalty: failsafe jobs when entity/order state was wrong (partial refund, cancel, failed order).
- React-class storefront + Node APIs; partnered across product and engineering on ambiguous integration requirements.

Maharshi Tech Solutions | Software Engineer | 01/2022 – 12/2022

- Production TypeScript/Node.js services, async tasks, Docker CI/CD, structured logging; code review in a small distributed-friendly team.

DMI, India | Software Engineer | 01/2021 – 12/2021

- Maintained production data-sync systems; troubleshooting, retries, observability.

PROJECTS

- BetterLog (wip) : observability so operators can reconstruct entity/order history (TypeScript, OpenTelemetry)
- Shortico : TypeScript/React production app; [Shortico](#) | [OS For creators & Brands](#)

EDUCATION

B.Tech, KIIT University, Gurgaon | 2022
